

iQ Drive® Technology, the most efficient air conditioner available.

Technology: iQ Drive® technology from NORDYNE delivers high-efficiency, 24.5-SEER cooling in a split-system air conditioner.

Conventional air conditioners cycle on and off at full capacity to maintain the indoor temperature, but iQ Drive works differently. iQ Drive is an inverter-driven rotary compressor that provides fully variable operation. It reacts to the cooling demand and changes the system capacity by modulating the speed of the compressor and motors. This results in very efficient operation over a wide range of conditions without cycling on and off in the conventional manner. The iQ Drive also operates very quietly.

Because of its energy efficiency and ozone-friendly R-410A refrigerant, iQ Drive air conditioners qualify for NORDYNE's ecoLogic™ green seal.

Availability: iQ Drive is available in 2, 3 and 4 ton capacities and offered in Maytag, Frigidaire, NuTone, Tappan and Westinghouse brands.

Awards: iQ Drive is the 2008 AHR Expo Innovation award for the *Cooling Performance* category, and the *Overall Winner* of the AHR Expo Innovation Award surpassing all categorical winners. This award competition is jointly sponsored by International Exposition Company, ASHRAE and ARI.

iQ Drive also received top honors receiving the 2007 Dealer Design Award, selected by an independent panel of professional HVACR contractors.

Contracting Business Magazine recognized NORDYNE as the 2008 Comfortech Product Showcase Award Winner for Forced Air Cooling in September 2008.
